PROFESSIONAL SUMMARY

Motivated and detail-oriented Web Developer and Data Science enthusiast currently pursuing a B.Tech in Information Technology, with strong academic performance (9.15 CGPA) and hands-on industry experience. Skilled in building scalable web applications and analyzing data to generate actionable insights. Seeking an entry-level role to apply technical expertise, contribute to organizational growth, and continuously enhance professional skills.

EDUCATION

B.Tech in Information Technology — Hindustan Institute of Technology and Science, Chennai

CGPA: 9.15 / 10.0

- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Object-Oriented Programming, Machine Learning

TECHNICAL SKILLS

- **Programming Languages:** Python, C, SQL
- **Web Technologies:** HTML, CSS, JavaScript, Flask
- **Data Science & ML:** Pandas, NumPy, Scikit-learn, Matplotlib, TensorFlow
- **Databases:** MySQL,Post-Gre
- **Tools & Platforms:** GitHub, VS Code, Jupyter Notebook
- **Cloud:** Basic Cloud Computing

INTERNSHIP EXPERIENCE

Data Science & Web Development Intern — Dedicated Digital Products and Solutions*March 2025 – Present*

- Developed and deployed 3+ web applications using Flask, HTML, CSS, and JavaScript.
- Optimized application performance, reducing page load time by approximately 25%.
- Performed data analysis using Python libraries (Pandas, NumPy) to support business decisions.
- Created interactive dashboards and reports for clients.

PROJECTS

AI-Based Conversational Chatbot

- Developed a customer-support chatbot using Python, TensorFlow, and Flask.
- Improved simulated response time by 40%.
- Integrated chatbot with front-end interface.
- Worked in a 3-member team and led system integration.

GP-Based Predictive Modeling Tool — Python Desktop App (*Personal Project*)

- Built a Python desktop application (Tkinter, scikit-learn, SciPy) that trains Gaussian Process Regression models on Excel data, auto-selecting the best-fit kernel from 4 candidates via closed-form leave-one-out cross-validation.
- Engineered automatic target-transformation logic (skew-based log detection) that cut prediction error from ~5.5% to ~1.1% MAE on a real 300-row dataset.
- Added batch prediction with 95% confidence intervals and automated, styled Excel report export (openpyxl) including error % columns and a summary sheet.
- Implemented multi-threaded model training to keep the GUI responsive, with timestamped session logging and Matplotlib feature-importance visualizations.

Study OS — Personal Productivity & Learning Web App (*Personal Project*)

- Designed and built a 4,000+ line single-page web app (JavaScript, HTML5, CSS3) with a Markdown note library, Pomodoro/stopwatch timers, and a chunked text-to-speech reading mode.
- Built a debounced auto-save system with cloud-storage-first, IndexedDB-fallback persistence so state syncs across devices and the app still works fully offline.
- Created 10+ custom animated visual themes using CSS custom properties, switchable at runtime with no page reload.
- Added client-side ZIP file reading (JSZip) and one-click Markdown export of study progress — entirely front-end, no server required.

ACHIEVEMENTS & AWARDS

- NPTEL Design-Thinking A Primer Silver Badge Certificate
- Finalist – Agentic AI Competition
- Won 2nd Place in Technical Innovation Project Presentation
- Participant – Carbon AI Hackathon
- Participant – Adobe Hackathon

EXTRA-CURRICULAR ACTIVITIES

- Actively participated in technical hackathons and coding competitions.
- Engaged in collaborative academic projects and peer learning sessions.
